3600	700	1200	1800	2200	2600	2850

Also available in galvanised version.

Sophisticated pallet storage system with a robust design is a cost-effective solution for all types of storage units. The system is highly variable and is used to store pallets, from standardised EUR pallets to various atypical pallet types. The beams and frames are available in a wide range of dimensions and can be tailored to the required weight of the goods to be stored and the pallet unit type. The beams can be adjusted at 50-mm intervals, thus making use of the maximum storage capacity of the rack. The beams are painted in high-quality epoxy-polyester powder paint, cured at 200 °C, in standard colour shades, or if requested by the customer, the frames are galvanized.
